Lashes & Brows

Our Product

What is Hairwell?

Formulated in Germany Hairwell professional tint provide intense, waterproof colour to lashes or brows which lasts 4-6 weeks.

The Results

No mascara required, no eyebrow pencil required, no more embarrassing smudges, smears or runs. Swimming is a dream and get ready time is minimised.

Select your Color

We have the full range of colours. Light Brown, Natural Brown, Blue Black, Graphite and Jet Black.

The Process | LASHES

1. All signs of eye make-up will be removed.
2. To protect your skin from tint, Vaseline will be applied under the bottom lashes.
3. A cotton pad will then be placed under both eyes. At this stage you will need to close your eyes ready for application.
5. The tint will then be applied to the lashes with a tint brush and left to develop for 10 minutes.
6. While the tint is developing, please let the technician know as soon as you feel any discomfort or need anything. We will not leave your side and give you a complementary hand or foot massage.
7. Once the tint is processed our technicians will gently remove the pad and product using a sterilized cotton pad and water. Please keep your eyes closed until you are asked to open them. Final touch-up may be needed with a cotton bud.
8. Take a look in the mirror at your new gorgeous look.
9. Our technician will then apply eye drops and eye cream.

Lashes & Brows

The Process | BROWS

1. All signs of eyebrow pencil will be removed.
2. To protect your skin from tint, Vaseline will be applied under and above your brows.
3. The tint will then be applied to the brows with a brow brush and left to develop. The tint will be removed from 1 to 10 minutes depending on how dark you wish to go.
4. Once the tint is processed our technicians will gently remove the product using water and a sterilized cotton pad.
5. Take a look in the mirror at your new gorgeous look.
6. Our technician will then apply eye drops and eye cream if needed.

You can Never Be Too Careful

Sometimes slight stinging will occur, this is nothing to worry about. If you experience severe irritation or stinging, tell your therapist so that she can immediately wash off the product.

Eye Conditions

Please tell the therapist before your treatment of any medical conditions or allergies that may affect your tinting experience. We do not recommend tinting if you have an eye infection, Stys, Cysts, Eczema, Blepharitis, dry eye

syndrome or have recently undergone any facial medical treatment.

After your Tints

Try not to wash your eyelashes or brows until the following morning, this will ensure that the colour lasts. Mascara can be worn over your tint for a more intense look and you may freely use your regular eye makeup remover.

My Next Appointment

The ideal time to get your next tint is usually 4 weeks but can be anywhere **from 2-5 weeks.**
